

I am uniquely qualified for City Council. I have a bachelor's degree in mathematics and am currently pursuing my masters in applied statistics. Coupled with my specialties in modeling and predictive analysis, these make me skilled at anticipating the future needs of Payson. I have been raising my children in Payson for several years. I have seen the struggles of the youth in Payson. I have heard and understand the concerns of their parents. I believe we must do more for our youth, as they are our future. Our youth must have safe walking routes to schools and a greater variety of activities outside of school where they can all feel not only welcome but also enjoy a feeling of belonging. Let's make sure they have a bright future. We need to conserve and preserve what makes Payson such a desirable place to raise a family. We need to grow responsibly, with consideration for resident needs, but we must lay the groundwork for future growth via an improved, adequate infrastructure. We must also establish and maintain transparency and accountability in the city budget. I look forward to serving and ask for your vote.
